

## PROTECTION HANDLE

**NOTE:** The protection handle is designed for the HMKST-series hooks mounted on swivel joints.

### MOUNTING

**NB!** Check before mounting that the front mounting bolt will be unthreaded in the lifting cross-section after the protection handle is mounted.

**Tools needed:**

- Allen key
- Wrench for the mounting bolt
- Torque wrench for the mounting bolt

**NB!** It is recommended to replace any used locknuts with new ones. The locking capability of a locknut is compromised when reused.

- 1** Remove the front mounting bolt, the washer and the locknut.
- 2** Mount the protection handle with the top bolt and washer, use Loctite 243 or equivalent.
- 3** Secure the protection handle with the front mounting bolt without washers. Tighten the new locknut accordingly to the user manual for the hook design.

**NOTE:** See the illustration on page 2 to identify the bolts.
