TACTICAL LADDER RESCUE

The tactical ladder is a rigid section aluminum ladder with great strength and versatility, the system design is highly visible for use in dark and difficult conditions. The Tactical ladder can be use in maritime operations and is alsowell suited for entering buildings or ledges in urban environments as well as containers.

The rescue ladders are designed for use by rescue workers and firemen working in harz conditions. The rescue workers is often equipped with heavy suits and gear in addition to breathing systems, this makes climbing ladders a hard job. By using Henriksen rescue ladders we believe the workers has the best possible means to access a ship in trouble.

Specifications

Typical system MBL*	1200 kg / 2645 lbs
Typical reach	10 m / 33 ft
Section weight	1,5 kg / 3.3 lbs
Section length	1,7 m / 5.6 ft
